Music Compose : Jariell A. Perlman

Sunday, October 16, 2016 7:36 PM

This is a music composition that I composed while in psychiatric hospital in my memory, just before my mother Elena V Perlman passed away in 2008. It is a short portion of the music melody, but it is very very long, in actuality. Anyhow, I just add it to share with anyone interested in melodies. My mother played the Piano and she could read sheet music and play. I, unfortunately, never was able to, even though I took band in junior high school, though at the time I could, in basic terms. I include a sheet music transcription for the melody. All in all I used 3 software applications to do this. Akoff Music Composer to get the pitch for the beginning of the tune with Microphone input and Midi file output. I used Notation Player for transcription to sheet music of the generated Midi file from Akoff, then I used Audacity audio recording software for generating the played audio in Notation Player, through audio loopback to Audacity audio recording software on same computer, and I trancribed the resulting audio file into MP3 with the additional MP3 pluggin for Audacity, as Audacity software is Open Source software and the MP3 export plugin for audio files needs to be installed separately. It is just a single installer file, no configuration.

Sincerely, Jariell A (Alexis) Perlman KE5FYD radio ham 2005 - 2016, to present...
